Abstract

As an industry leader, Toshiba has a strong history of innovation. This presentation will discuss, from the industry perspective, some of the engineering challenges and design considerations in medium voltage drives.

Biography

Mr. Ledoux has been with Toshiba International Corporation for more than 30 years in a variety of roles. He was a key member of the team that first brought Toshiba’s drive manufacturing program to the U.S. market. Presently, he is the Product Manager responsible for leading the development of Toshiba’s line of medium voltage drives.

Mr. Rayner has been involved in engineering at Toshiba drives for 20 years. Currently, as an Assistant Technology Executive, his responsibilities include overseeing all aspects of the design and development of low voltage drives for domestic and international markets, as well as quality control and testing in the Houston manufacturing facility.
